

How to Study for Exam 3

Effective studying for ENGR 132 exams involves some review and then practice and more practice. This is a closed-book, no-calculator exam. The exam is a mix of short answer, multiple choice, and open-ended problems.

Here's a prioritized list of things you can do:

- Review the **learning objectives** posted on Blackboard. Make sure that you have reviewed all of the items on this list.
- Look over the **formula sheet**. This is the exact sheet that you will be given during the exam. You should know how to use everything on the formula sheet.
- Review all on-line modules for **Classes 15-25**.
- Review all lecture slides for **Classes 15-25**.
- Review, correct, and/or complete all Problem Sets **PS08-PS12**.
- Review all Exploration Activities for **Classes 15-25**. This includes **XA_Ops**, **XA_FR**, **XA_Sel**, **XA_WL**, **XA_FL**, and **XA_CL**.
- Take a look at practice exam problems so that you get a feel for the types of problems you can expect. These are posted on Blackboard.
