

How to Study for Exam 2

Effective studying for ENGR 132 exams involves some review and then practice and more practice. This is a closed-book, no-calculator exam. The exam is a mix of short answer, multiple choice, and open-ended problems.

Here's a prioritized list of things you can do:

- Review the **learning objectives** posted on Blackboard. Make sure that you have reviewed all of the items on this list.
- Look over the **formula sheet**. This is the exact sheet that you will be given during the exam. You should know how to use everything on the formula sheet.
- Review all on-line modules for **Classes 7-14**.
- Review all lecture slides for **Classes 7 - 14**.
- Review, correct, and/or complete all Problem Sets **PS05 - PS07**.
- Review all Exploration Activities for **Classes 7-14**. This includes **XA_CDP1, XA_CDP2, XA_UDF1, XA_UDF2, XA_Reg1, XA_Reg2, XA_FD1, and XA_FD2**.
- Take a look at practice exam problems so that you get a feel for the types of problems you can expect. These are posted on Blackboard.
